Klik Lighting Connection

Klik is the lighting connection system for all your lighting designs, benefiting from its modular and adaptable design.

Klik Lighting Connection

Klik is the lighting connection system for all your lighting designs, benefiting from its modular and adaptable design.

With it's pre-wired plugs, Klik saves time on site, eliminates the chance of poor connections and allows for the system to adapt as needs change.
Luminaires can be plugged-n in seconds, with absolute safety and without circuit isolation. The secure, simultaneous mechanical and electrical connection gives complete confidence.

Design
Klik is able to exploit the benefits of pre-fabricated wiring systems through its modular and adaptable design. From concept to commissioning, Klik adapts to meet your requirements.

Install
The klik connector system brings plug-in convenience and versatility to lighting. Lights can be plugged-in, in seconds, with absolute safety without circuit isolation.

Use
Klik is truly fit and forget lighting connection system. With a range of settings for daylight linked dimming, occupancy sensing photocell control for standard luminaires and DALI control, after Klik is installed, you'll forget it's event here.

Adapt
Part of the problem with traditional lighting systems comes when a building or office space needs to change, the inherent benefit of Klik is that adapting to a new layout is as easy as plugging in a plug.
