Inside / Out

hagercad.pro Software

hagercad.pro is a fully integrated, electrical planning software from Hager, offering maximum simplicity, speed, reliability and flexibility.

It allows you to document and designed your complex electrical planning projects in an easy to use environment.

hagercad.pro

Plan. Design. Win.

As specialists in simple and safe electrical installation, not only do we understand a great deal about lowvoltage distribution system planning and tenders, we also know exactly what your day-to-day business looks like. And what matters are intelligent tools that make your work significantly easier.

hagercad.pro takes care of complete planning and documentation – precise, comprehensive and fully automatic.

hagercad.pro. Maintaining an overview

We've all had one of those days when everything happens at once: The new project, the new deadline for an ongoing planning task and the exciting project that calls on every colleague who is already busy working on something else. hagercad.pro turns days like these into days when everything clicks into place.

hagercad.pro

Get off to a better start

The project editor as project manager: Lets you keep an eye on everything at all times. You can see just how well it works as soon as you create a new project. And by the time you get to the planning phase, you'll wonder how you ever managed without the numerous practical, logically linked functions. hagercad.pro / project editor

What's the fastest route to a circuit diagram? An automatic circuit diagram! With hagercad.pro. you can create all-

With hagercad.pro, you can create allpole or single-pole diagrams without delay.

hagercad.pro does everything you need it to do. The table view records all circuits one after the other – a single click and everything is drawn accurately. Enter your text, cable types and cable specifications directly in the table and these are automatically incorporated into the circuit diagram. Or you can work, change and add information directly in the drawing view.

Plan more

All-pole planning

hagercad.pro simplifies your day-today work intelligently: Crossreferences to all pages and devices are generated automatically and heat calculation according to BS EN 61439-1/-2 is created and all planned devices are saved. This enables you to move directly to layout planning.

Clever calculation

hagercad.pro works quickly, accurately and logically. As soon as you start your schematic diagram, you will only be presented with housings that match your devices. Automatic queries make it easier to decide: How should feed and output terminals be integrated, which space reserves and degrees of protection are provided?

hagercad.pro makes sure everything is as it should be. The automatic power loss and heat calculation also takes into account every planned device – including the cooling surfaces of the cabinet itself. Even in environments with critical room temperatures, everything is taken care of.

Automatic power loss calculation with hagercad.pro.

Calculate and set up cabinets

The distribution board overview makes size estimates easier. Configure your cabinet down to the minutest detail click by click: Compare the individual elements such as transparent doors or bases in 2D and 3D views and rotate the board in the room.

Work with the right view for you:

- 01 View with covers
- 02 View without covers
- 03 View in 3D, can be rotated freely

Think ahead

Documenting complex planning can be resource intensive.

Clear documentation gives your users long-term planning security – even in the event of subsequent changes or modernisations. Thankfully, hagercad. pro does most of it for you.

Easy label creation is also included: Choose between various label holders and from an extensive, intuitive collection of pictograms and texts. hagercad.pro quickly turns "quite complex" into "pleasantly simple".

Documentation

Documentation, important documents, supporting documents – and of course user manuals: Even after years you will need to be able to access all of these without delay. hagercad.pro takes care of this too. With a complete documentation structure that securely stores all images, assembly instructions, etc.

Everything where you need it, whenever you need it. hagercad.pro manages all of your documentation and user manuals.

User manuals

A single click links all relevant user manuals and photos to your planning project – and your project folder is immediately updated. When it's time for handover, you simply need to compress and send all of the relevant documents.

hagercad.pro: Download now!

Get started now with our solution for planning low-voltage distribution systems.

hagercad.pro, the latest generation of software for low-voltage distribution system planning is available for you to try now: Download the full version with all innovative functions free of charge.
