Klik Lighting Control Module

At a Glance

More control than ever.

AAGLCM418

Lighting Connection & Control

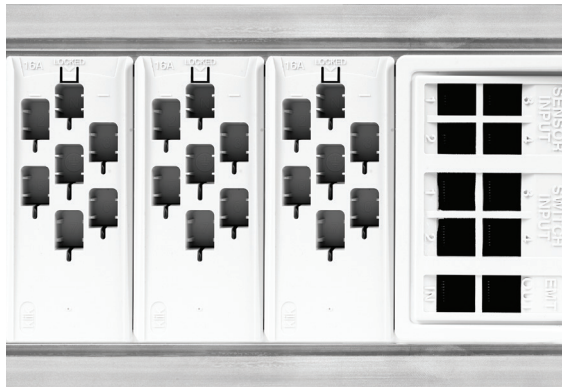

Klik is our secure lighting connection and control system that brings plug-in convenience and versatility to lighting.

It's unique modular plug and socket interface provides a simultaneous mechanical and electrical connection in one easy, click-in action.

Save Time

Klik can save you time during design, installation, commissioning and maintenance. This is all due to a combination of our unique plug-in, pre-wired system, our extensive testing and easy to access technical support.

Provide Flexibility

Klik is designed as a fully scalable system, enabling expansion of the system over time by adding additional pluggable marshalling boxes, leads and sensors easily.

Control Lighting

With individually configurable and dimmable outputs for analogue or digital luminaires, our Lighting Control Module utilises inputs such as occupancy sensors, light sensors and switches for total control.

KlikLink App

Most lighting control requires commissioning. Klik LCM can be set up using our easy programming tool **KlikLink**, allowing quick and easy commissioning whether completed by the contractor or a commissioning engineer.
