# Design 30 Consumer Unit

**:hager**

A more aesthetically pleasing unit including extra features to ease installation.

## Safer

The pre-installed cable clamp secures meter tails with a single screw, ensuring that connections to the main switch terminals remain as tight and secure as you left them.

## Secure

Our health & safety lock kit and padlock provides the ability to isolate circuits and secure the consumer unit prior to the occupation of a property. This is achieved with the use of the health & safety bracket (**VMHBL**) and padlock (**JK25A**). When the lock is removed, the retained cover can simply be clicked back into place.

## Easier Installation

Ample cable space is provided as standard. Our reduced height RCBO (up to 32A) is similar in height to an MCB, ensuring an easier installation where lack of cabling space can be a challenge.

## The Full Package

Our Design Range has been launched with a large portfolio of accessories. Protector plates for cable entries, a cable clamp to secure meter tails & a stand off brackets all allow for an installation method that suits you.

## From 2 to 40 ways

With the ability to accommodate from 2 to 40 ways, Design 30 has a solution for all requirements. These may include a board with a large number of protected circuits, either MCB or RCBO, the installation of surge protection, metering or building automation.
