Design 50 Consumer Unit

:hager

Design 50 focuses on clean aesthetics and a flush fit for seamless integration into any home.

Convenience

The frame contains the incomer, neutral and earth terminations and the cable clamp. This can be removed whilst the building work is completed and quickly re-installed into the back-box later. It is then secured with the use of four wing nuts.
Installation Depth

To allow for a range of installation depths within a wall, the frame is adjustable. There are flanges on the frame which sit on the finished surface, helping to ensure that the devices always protrude through the front cover uniformly.

Colours & Finishes

Our Design 50 flush consumer unit is available in finishes to compliment any decor. this includes colours and vinyl wrapping to exceed your customers expectations.

Safety

A cable clamp comes as standard on all of our flush fit boards to help secure the tails in place and prevent any movement of meter tails being transmitted to the terminals of the main switch.

Installation Options

Knockouts on the top, bottom, sides and rear of the back box allow for multiple cable entry options. Oval knockouts can be protected with 38mm open grommet (**VMGROM**). Raised sides on the back box give a reference for plaster boarding, with multiple fixing points throughout to allow a secure installation.
